

## Diploma Programme subject outline—Group 5: mathematics

|   |   |  |   |
|---|---|--|---|
| <b>School name</b>  | Gymnázium, Šrobárova 1, Košice, Slovakia        | <b>School code</b>   | 061626  |
| <b>Name of the DP subject</b><br><i>(indicate language)</i> | DP Mathematics: Applications and Interpretation |  |   |
| <b>Level</b><br><i>(indicate with X)</i>                    | Higher <input checked="" type="checkbox"/>      | Standard completed in two years <input checked="" type="checkbox"/>                | Standard completed in one year * <input type="checkbox"/> |
| <b>Name of the teacher who completed this outline</b>       | Katarína Hribová                                | <b>Date of IB training</b>   | 3 February – 3 March 2021                                 |
| <b>Date when outline was completed</b>                      | 28 June 2021                                    | <b>Name of workshop</b><br><i>(indicate name of subject and workshop category)</i> | Mathematics: Applications and Interpretation (Cat.1)      |

\* All Diploma Programme courses are designed as two-year learning experiences. However, up to two standard level subjects, excluding languages ab initio and pilot subjects, can be completed in one year, according to conditions established in the *Handbook of procedures for the Diploma Programme*.

### 1. Course outline

- Use the following table to organize the topics to be taught in the course. If you need to include topics that cover other requirements you have to teach (for example, national syllabus), make sure that you do so in an integrated way, but also differentiate them using italics. Add as many rows as you need.
- This document should not be a day-by-day accounting of each unit. It is an outline showing how you will distribute the topics and the time to ensure that students are prepared to comply with the requirements of the subject.
- This outline should show how you will develop the teaching of the subject. It should reflect the individual nature of the course in your classroom and should not just be a “copy and paste” from the subject guide.
- If you will teach both higher and standard level, make sure that this is clearly identified in your outline.

|        | Topic/unit<br>(as identified in the IB subject guide)<br><i>State the topics/units in the order you are planning to teach them.</i> | Contents   | Allocated time   | Assessment instruments to be used   | Resources<br><i>List the main resources to be used, including information technology if applicable.</i>   |
|--------|---|--|--|---|---|
|        |   |  | One class is 45 minutes.<br>In one week there are SL: 4<br>HL:6 classes.                                     |   |   |
| Year 1 | <b>Topic 1:<br/>Number and Algebra</b>  | <p align="center"><b><u>SL and HL common content</u></b></p> <p><b>SL 1.1</b><br/>-Operations with numbers in the form <math>a \times 10^k</math> where <math>1 \leq a &lt; 10</math> and <math>k</math> is an integer</p> <p><b>SL 1.2</b><br/>-Arithmetic sequences and series</p> <p><b>SL 1.3</b><br/>-Geometric sequences and series</p> <p><b>SL 1.4</b><br/>-Financial applications of geometric sequences and series: compound interest, annual depreciation</p> <p><b>SL 1.5</b><br/>-Laws of exponents with integer exponents<br/>-Introduction to logarithms with base 10 and e</p> <p><b>SL 1.6</b><br/>-Approximation<br/>-Upper and lower bounds of rounded numbers<br/>-Percentage errors<br/>-Estimation</p> <p><b>SL 1.7</b><br/>-Amortization and annuities using technology</p> <p><b>SL 1.8</b><br/>Use technology to solve:<br/>-Systems of linear equations in up to 3 variables<br/>-Polynomial equations</p> | <p>Recommended teaching hours:</p> <p>SL: 16 hours<br/>(21 classes)</p> <p>HL: 29 hours<br/>(39 classes)</p> | <p>Assessment revolves around evaluating students' ability to apply what they have learned in mathematics to real-world contexts.</p> <p>Students will be expected to demonstrate the following:</p> <ul style="list-style-type: none"> <li>-knowledge and understanding</li> <li>-problem solving</li> <li>-communication and interpretation</li> <li>-technology</li> <li>-reasoning</li> <li>-inquiry approaches</li> </ul> <p>Assessment:</p> <ul style="list-style-type: none"> <li>-will take place during the course</li> <li>-discussions</li> <li>-homework</li> <li>-short tests</li> <li>-end of topic tests</li> <li>-end of chapter tests</li> </ul> | <p>Textbooks:</p> <ul style="list-style-type: none"> <li>• IB Mathematics: Applications and Interpretations SL (OUP)</li> <li>• IB Mathematics: Applications and Interpretations HL (OUP)</li> </ul> <p>Online resources:</p> <ul style="list-style-type: none"> <li>• <a href="https://questionbank.ibo.org/">https://questionbank.ibo.org/</a></li> <li>• <a href="https://app.kognity.com/">https://app.kognity.com/</a></li> <li>• <a href="https://www.thinkib.net/mathapplications">https://www.thinkib.net/mathapplications</a></li> <li>• <a href="https://resources.ibo.org/home">https://resources.ibo.org/home</a></li> </ul> <p>Software/Technology:</p> <ul style="list-style-type: none"> <li>• GDC</li> <li>• Desmos</li> <li>• GeoGebra</li> <li>• Other software</li> </ul> <p>Other resources:</p> <ul style="list-style-type: none"> <li>• YouTube</li> <li>• Khan Academy</li> <li>• Mathematical Exploration examples</li> <li>• IB Question Bank</li> </ul> |

|--|--|---|--|--|--|

|  |  |   |  |  |  |
|--|--|---|--|--|--|
|  | <p style="text-align: center;"><b>Topic 3:<br/>Geometry and<br/>Trigonometry</b></p> | <p style="text-align: center;"><u><b>HL content</b></u></p> <p><b>AHL 2.7</b><br/>-Composite functions<br/>-Inverse functions</p> <p><b>AHL 2.8</b><br/>-Transformation of graphs<br/>-Translations<br/>-Reflections in the <math>x</math>-axis and in the <math>y</math>-axis<br/>-Vertical stretch<br/>-Horizontal stretch<br/>-Composite transformations</p> <p><b>AHL 2.9</b><br/>Modelling with the following functions:<br/>1.Exponential models to calculate half-life<br/>2.Natural logarithmic models<br/>3.Sinusoidal models<br/>4.Logistic models<br/>5.Piecewise models</p> <p><b>AHL 2.10</b><br/>-Scaling very large or small numbers using logarithms<br/>-Linearizing data using logarithms or a power relationship</p> <p style="text-align: center;"><u><b>SL and HL common content</b></u></p> <p><b>SL 3.1</b><br/>-The distance between two points in three dimensional space, and their midpoint<br/>-Volume and surface area of three dimensional solids including right-pyramid, right-cone, sphere, hemisphere and combination of these solids<br/>-The size of an angle between two intersecting lines or between a line and a plane</p> <p><b>SL 3.2</b><br/>-Use of sine, cosine and tangent ratios to find the sides and angles of right-angled triangles<br/>- The sine rule<br/>-The cosine rule<br/>-Area of a triangle</p> | <p style="text-align: center;">Recommended teaching hours:</p> <p style="text-align: center;">SL: 18 hours<br/>(24 classes)</p> <p style="text-align: center;">HL: 46 hours<br/>(61 classes)</p> |  |  |
|--|--|---|--|--|--|

**SL 3.3**

- Applications of right and non-right angled trigonometry, including Pythagoras' theorem
- Angles of elevation and depression

**SL 3.4**

- The circle: length of an arc; area of a sector

**SL 3.5**

- Equations of perpendicular bisectors

**SL 3.6**

- Voronoi diagrams
- Nearest neighbour interpolation
- Application of the "toxic waste dump" problem

**HL content****AHL 3.7**

- The definition of a radian and conversion between degrees and radians
- Using radians to calculate area of sector, length of arc

**AHL 3.8**

- The definitions of  $\cos \theta$  and  $\sin \theta$  in terms of the unit circle
- The Pythagorean identity
- Definition of  $\tan \theta$
- Extension of the sine rule to the ambiguous case
- Graphical methods of solving trigonometric equations in a finite interval

**AHL 3.9**

- Geometric transformations of points in two dimensions using matrices
- Geometric interpretations of the determinant of a transformation matrix

**AHL 3.10**

- Vectors and scalars

**AHL 3.11**

- Vector equation of a line in 2D and 3D

**AHL 3.12**

- Vector applications to kinematics
- Modelling linear motion

|--|---|--|---|--|

**AHL 4.13**

- Non-linear regression
- Evaluating of least squares regression curves using technology
- Sum of square residuals ( $SS_{res}$ )
- The coefficient of determination ( $R^2$ )

**AHL 4.14**

- Linear transformation of a single random variable
- Expected value of linear combinations of  $n$  random variables
- Variance of linear combinations of  $n$  independent random variables
- $\bar{x}$  as an unbiased estimate of  $\mu$
- $s_{n-1}^2$  as an unbiased estimate of  $\sigma^2$

**AHL 4.15**

- A linear combination of  $n$  independent normal random variables is normally distributed
- Central limit theorem

**AHL 4.16**

- Confidence intervals for the mean of a normal population

**AHL 4.17**

- Poisson distribution, its mean and variance
- Sum of two independent Poisson distributions

**AHL 4.18**

- Critical values and critical regions
- Test for population mean for normal distribution
- Test for proportion using binomial distribution
- Test for population mean using Poisson distribution
- Use of technology to test the hypothesis that the population product moment correlation coefficient is 0 for bivariate normal distributions
- Type I and II errors including calculations of their probabilities

**AHL 4.19**

- Transition matrices
- Regular Markov chains
- Initial state probability matrices
- Steady state and long-term probabilities

|--------|-------------------------------|---|--|--|--|

**HL content**

**AHL 5.9**

- The derivatives of  $\sin x$ ,  $\cos x$ ,  $\tan x$ ,  $e^x$ ,  $\ln x$ ,  $x^n$ , where  $n \in \mathbb{Q}$
- The chain rule, product and quotient rules
- Related rates of change

**AHL 5.10**

- The second derivative
- Use the second derivative test to distinguish between a maximum and a minimum point

**AHL 5.11**

- Definite and indefinite integration of  $x^n$  where  $n \in \mathbb{Q}$ , including  $n = -1$ ,  $\sin x$ ,  $\cos x$ ,  $\frac{1}{\cos^2 x}$  and  $e^x$
- Integration by inspection, or substitution of the form  $\int f(g(x))g'(x)dx$

**AHL 5.12**

- Area of the region enclosed by a curve and the  $x$  or the  $y$ -axes in a given interval
- Volumes of revolution about the  $x$ -axis or  $y$ -axis

**AHL 5.13**

- Kinematic problems involving displacement  $s$ , velocity  $v$  and acceleration  $a$

**AHL 5.14**

- Setting up a model/differential equation from context
- Solving by separation of variables

**AHL 5.15**

- Slope fields and their diagrams

**AHL 5.16**

- Euler's method for finding the approximate solution to first order differential equations
- Numerical solution of  $\frac{dy}{dx} = f(x, y)$
- Numerical solutions of the coupled system  $\frac{dx}{dt} = f_1(x, y, t)$  and  $\frac{dy}{dt} = f_2(x, y, t)$

## 2. IB internal assessment requirement to be completed during the course

Briefly explain how and when you will work on it. Include the date when you will first introduce the internal assessment requirement to your students, the different stages and when the internal assessment requirement will be due.

The internal assessment (IA) is an individual exploration. This is a piece of written work that involves investigating an area of mathematics.

- Students will be introduced to Mathematical Exploration during the second term of Year 1
- Students will do a short practice Mathematical Exploration Internal Assessment in Year 1 (6-8 pages)
- Students will continue to work on their Mathematical Exploration during Year 2
- Students are expected to complete their Final Mathematical Exploration Internal Assessment in Year 2 (deadline : see school calendar)

## 3. Links to TOK

You are expected to explore links between the topics of your subject and TOK. As an example of how you would do this, choose one topic from your course outline that would allow your students to make links with TOK. Describe how you would plan the lesson.

| Topic   | Link with TOK (including description of lesson plan)  |
|---|---|
| <b>Topic 1:</b> Number and Algebra<br><b>SL 1.2</b> Arithmetic sequences and series | TOK : Is all <b>knowledge</b> concerned with identification and use of patterns ? Consider Fibonacci numbers and connections with the Golden ratio.<br>Aim : Explore knowledge via the perspectives + methods and tools elements in mathematics from the TOK curriculum, considering Fibonacci numbers and connections with the Golden ratio. (Note : The lesson follows cooperative planning with the ToK teacher.)<br>Activity : Students will look at how mathematics often appears in nature. They will start by recalling Fibonacci numbers and their sequence. Then students will be presented with some pictures to explore the Golden ratio (pair/group work). They will present their findings to the rest of the class. Connections will be drawn between the Fibonacci numbers and the Golden ratio. Students will find their own examples and think of other possible applications. |

## 4. Approaches to learning

Every IB course should contribute to the development of students' approaches to learning skills. As an example of how you would do this, choose one topic from your outline that would allow your students to specifically develop one or more of these skill categories (thinking, communication, social, self-management or research).

| Topic  | Contribution to the development of students' approaches to learning skills (including one or more skill category)   |
|--|---|
| <b>Topic 4:</b> Statistics and Probability<br><b>AHL 4.12</b> Data collection methods: surveys and questionnaires<br><b>SL 4.1 – SL 4.4 or other</b> | Students will choose a research topic of their interest, design a questionnaire and conduct their own survey (among their peers, family members, members of the public,...). After collecting their data, they will analyse it, present it graphically and draw conclusions. They will make a short presentation about their research to their classmates and answer their questions. |

## 5. International mindedness

Every IB course should contribute to the development of international-mindedness in students. As an example of how you would do this, choose one topic from your outline that would allow your students to analyse it from different cultural perspectives. Briefly explain the reason for your choice and what resources you will use to achieve this goal.

| Topic  | Contribution to the development of international mindedness (including resources you will use)   |
|--|--|
| <b>Topic 5:</b> Calculus<br><b>SL 5.1</b> Introduction to the concept of a limit | International-mindedness : Attempts by Indian mathematicians (500-1000 CE) to explain division by zero.<br><br>Students will explore the history and origin of zero, operations with zero and the connection with the concept of a limit. e.g. You Tube video : The story of zero – getting something from nothing ; The Royal Institution <a href="https://aeon.co/videos/a-history-of-nothing-how-zero-went-from-nil-to-something">https://aeon.co/videos/a-history-of-nothing-how-zero-went-from-nil-to-something</a><br>Other resources will include various websites and books about the history of mathematics.<br><br>Reason for choice : Zero is a fascinating concept and nowadays we take it for granted. I think it is important for students to see how the concept of zero developed and how it was perceived and used in different cultures. |

## 5. Development of the IB learner profile

Through the course it is also expected that students will develop the attributes of the IB learner profile. As an example of how you would do this, choose one topic from your course outline and explain how the contents and related skills would pursue the development of any attribute(s) of the IB learner profile that you will identify.

| Topic   | Contribution to the development of the attribute(s) of the IB learner profile   |
|---|---|
| <b>Topic 3 :</b> Geometry and Trigonometry<br><b>SL 3.2</b> Sine, cosine, tangent ratios ; Sine rule, Cosine rule, Area of triangle | Inquirers – Students will look at different types of triangles and ask curious questions about their connection with different trigonometry ratios and rules.<br>Knowledgeable – Students use their understanding of the concepts and explore the application of their knowledge in contexts such as triangulation, map-making and other subjects such as physics.<br>Thinkers – Students will work on complex problems applying their knowledge of different trigonometry ratios and rules<br>Communicators – Students will be expected to communicate their ideas individually using correct mathematical writing but also with confidence and collaboratively as a part of a group when working in pairs/groups.<br>Principled – In all areas of this topic, students are expected to sketch well-labelled diagrams to support their solutions and to work out the answers systematically : write down the formula, substitute, calculate, give answer including units<br>Open-minded – Students will learn about the occurrence of Pythagoras' theorem in early Chinese and Indian manuscripts and the earliest references to trigonometry in Indian mathematics.<br>Reflective – Students will reflect upon their work, identify misconceptions and seek ways for improvement. |

## 6. Resources

Describe the resources that you and your student will have to support the subject. Indicate whether they are sufficient in terms of quality, quantity and variety. Briefly describe what plans are in place if changes are needed.

I have come across the following resource suggestions during the IB workshop. Some are free and some require purchase / subscription. Some textbooks will be used for reference and as teacher planning material, some will be used by students as the study material. The school is supportive in purchasing the resources needed and sufficient funds have been allocated.

Textbooks :

- IB Mathematics: Applications and Interpretations SL (OUP)
- IB Mathematics: Applications and Interpretations HL (OUP)
- Mathematics: Applications and Interpretations SL (Pearson)
- Mathematics: Applications and Interpretations HL (Pearson)
- Mathematics for the IB Diploma: Applications and Interpretation SL (Hodder)
- Mathematics for the IB Diploma: Applications and Interpretation HL (Hodder)
- Mathematics Core Topics SL1 (Haese)
- Mathematics Applications and Interpretations SL2 (Haese)
- Mathematics Core Topics HL1 (Haese)
- Mathematics Applications and Interpretations HL2 (Haese)
